

Muhammad Usama Bin Akhtar Khan

Senior Frontend Engineer | React | Next.js | TypeScript

Wah Cantt, Pakistan | usamakhagt4@gmail.com | +92 305 5772374 | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Frontend Engineer with almost 5 years of professional experience building scalable, responsive, and feature-rich web applications using React, Next.js, TypeScript, Tailwind CSS, Redux, TanStack Query/React Query, and modern frontend tooling. Experienced in leading frontend delivery, translating Figma designs into production-ready interfaces, building reusable component systems, integrating REST APIs, improving code quality, and collaborating closely with product, design, and backend teams in remote environments.

TECHNICAL SKILLS

Frontend:	React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, SASS
State & Data:	Redux, Zustand, TanStack Query, React Query, SWR, Axios, REST APIs
Forms & Validation:	React Hook Form, Formik, Yup
Styling & UI:	Tailwind CSS, Tailwind UI, shadcn/ui, Material UI, Ant Design, Bootstrap, Styled Components
Testing & Tooling:	Git, ESLint, Prettier, Jest, Cypress, Vite, Turbopack, npm, Yarn
Design	Figma, Adobe XD, responsive design, component architecture, UI/UX implementation
Collaboration:	

PROFESSIONAL EXPERIENCE

Senior Frontend Developer Victoria Plum - Remote, England	Jul 2024 - Present
- Lead frontend development for Giolino, a modern web application built with React, Next.js, TypeScript, and Tailwind CSS. - Mentor and guide a 3-person frontend team across UI implementation, component structure, code quality, and delivery planning. - Build scalable, reusable, and responsive frontend components aligned with product and design requirements. - Collaborate with product, design, and backend teams to deliver feature-rich user experiences and resolve complex UI/JavaScript issues. - Improve frontend quality through ESLint, Prettier, pre-commit checks, and modern Turbopack-accelerated workflows.	
Frontend Developer Next Order - Remote, Australia	Jul 2023 - Jul 2024
- Developed and maintained the Next Order Control Panel, a React-based admin application for managing restaurant/store operations. - Converted Figma designs into responsive, production-ready interfaces using React, TypeScript, and Tailwind CSS. - Built reusable UI components for dashboards, tables, forms, filters, modals, tabs, and analytics views. - Delivered data-heavy features including staff reports, service charge management, inventory analytics, voided item reports, and store-level controls. - Integrated REST APIs and frontend data-fetching flows using Axios, SWR, and React Query patterns while improving bugs, maintainability, and UX.	
Frontend Developer Emumba - Islamabad, Pakistan	Sep 2020 - Jun 2023
- Built frontend features across web applications, dashboards, GPS-based tracking systems, and tax calculation platforms. - Developed complex forms, interactive dashboards, data tables, and chart-based interfaces using React.js, Next.js, TypeScript, Redux, Formik, Styled Components, Ant Design, Material UI, and React Query. - Collaborated closely with UI/UX designers to review Figma designs and convert them into functional, user-friendly applications. - Contributed to frontend architecture decisions, reusable components, bug fixing, and code quality improvements across fintech, fleet tracking, and analytics projects.	
Frontend Developer TheTekSol - Remote, Pakistan	Oct 2018 - Sep 2020
- Developed a complete review management system for automating evaluation workflows for final-year projects and MS/PhD theses. - Built responsive interfaces, forms, review flows, and admin-facing screens using HTML, CSS, JavaScript, jQuery, Bootstrap, and Laravel views. - Delivered a production system used by COMSATS University Islamabad, Wah Campus.	

SELECTED PROJECTS

shadcn-virtualized-tree - Typed React tree library for large hierarchical datasets | [Live Demo](#) | [GitHub](#)

- Built a reusable React/TypeScript tree library with a headless useTree hook and optional fixed-row virtualized UI.
- Designed support for thousands of nodes with configurable overscan, controlled/uncontrolled expansion and selection, tri-state parent selection, descendant propagation, disabled-node handling, and immutable move/reparent operations.
- Implemented keyboard navigation, ARIA tree metadata, mixed checkbox semantics, custom labels/icons, lazy-loading indicators, theme tokens, CSS variables, and a live GitHub Pages playground.

Giolindo - Modern React/Next.js web application

- Led frontend delivery for a dynamic single-page application using React, Next.js, TypeScript, and Tailwind CSS.
- Created responsive UI components, improved development workflows, and mentored frontend team members on maintainable implementation patterns.
- Applied frontend best practices around component structure, code quality, linting, formatting, and pre-commit checks.

Next Order Control Panel - Admin panel for restaurant/store management

- Built admin panel features for vouchers, menus, staff reports, inventory dashboards, voided item analytics, service charge settings, and store controls.
- Developed reusable React components for tables, filters, modals, dashboards, tabs, and form-heavy workflows using Tailwind CSS and TypeScript.

Capital Bee - Crypto tax calculation and analytics platform

- Worked on dashboard screens showing profit/loss, top trades, success rate, and analytics for connected crypto wallets.
- Focused on responsive layouts, chart/table-heavy interfaces, and clean frontend implementation as a frontend developer and markup specialist.

Flux - Fleet Management System - GPS-based ride tracking app

- Built frontend features for tracking borrowed bikes using React.js, TypeScript, Redux, Formik, Yup, and Styled Components.
- Implemented themed components, forms, and tracking-related UI flows with attention to usability and maintainability.

Review Management System - Academic evaluation automation system

- Developed production evaluation workflows for final-year projects and MS/PhD thesis reviews used by COMSATS University Islamabad, Wah Campus.
- Implemented responsive pages and admin interfaces using Laravel, JavaScript, jQuery, Bootstrap, HTML, and CSS.

FRONTEND ENGINEERING STRENGTHS

Scalable UI architecture: Reusable components, clean state boundaries, predictable data-fetching flows, and maintainable folder/component structures.

Senior collaboration: Comfortable working directly with product, design, backend, and QA teams in remote environments to clarify requirements and ship stable features.

Code quality: Practical use of TypeScript, linting, formatting, pre-commit checks, component refactoring, and review feedback to keep frontend code reliable.

Data-heavy interfaces: Strong experience with dashboards, analytics screens, tables, filters, forms, charts, reporting flows, and admin/control-panel products.

Design implementation: Accurate Figma-to-frontend conversion with responsive layouts, accessibility-minded interactions, and consistent design-system usage.

TARGET ROLE FIT

- Strong hands-on match for Senior Frontend Engineer roles focused on React, Next.js, TypeScript, design-system implementation, and scalable web application development.
- Experienced in feature delivery from requirements and Figma designs through implementation, API integration, bug fixing, review, and release readiness.
- Portfolio/GitHub includes a typed React library and live playground demonstrating advanced frontend concepts such as virtualization, headless hooks, controlled state, keyboard support, ARIA metadata, theming, and drag-and-drop ordering.

EDUCATION

BS in Software Engineering, COMSATS University Islamabad - Wah Campus

2016 - 2020
